

RODEL URANI, IT/Cyberstrategy Consulting Practitioner
Professional profile, updated 3 October 2015

2702 Park Avenue, Pasay City email:rodel@urani.tel cel:63 925 8777011
Relevant info and interests may be found here: <http://rodel.urani.tel>

SUCCINCT Rodel Urani has been in IT practice for almost 20 years. Stacked up a good track record and that made him engaged more than a dozens of companies. His clients both local and multinational has repeatedly done business with him.

His cyberstrategy exploit discerns solid and tested fundamental and methodological requisites of the different areas of information technology, and help deepens his professional and consultancy practice.

His varied industry exposure having engaged service provider, marketing, support, didactics and education, military, banking, business process outsourcing, energy and manufacturing, transportation, had allowed him to personally explore the empirics and workings of information and communication technology – meaning its respective applications – in many organizations and their businesses. He has collaborated with and led professional organizations, organized events and participated in government efforts formulating rules and regulations.

He had been responsible in the formulation of capital expenditures, management of IT initiatives and instituting solutions, address improvement and related practices. He has considerable experience in planning, deploying and maintaining various platforms. The aggregate of his occupation and commercial endeavors and dealings include cloud platform(s), systems integration, internetworks and design, security, mixtures of operating systems, virtualization, enterprise productivity suites and business applications. Opportunities such as these had him captured firsthand account especially how ICT services are carried out and programs are developed. Had gotten him to understand the complex properties involve in the execution of entire ICT lifecycle within an organization – sometimes extending with stakeholders, if not partner's domain. He is known to correct and solve problems quick, make everyone involve in an effort's entire process including top management, wield transparency in all aspects especially in budget and acquisitions and act on matters professionally and diligently.

As professor, he explored how institutions were running significant events relative to learning. He has pioneered the development of security and digital forensics as undergraduate level elective courses and specialization, respectively. He also teaches at the graduate school. He read books of disparate subjects and wrote articles about IT as well as examine the efficacy of international standards and regulatory regimes.

Strategict Company is truly his first entrepreneurial brainchild. He established the company from scratch and developed market offerings, underpinnings and processes required of its commercial operations and compliance. In more than 2 years of existence, Strategict won global quality award. He wrote Service Charter Framework (SCF) which ascertains dealings in win-win, and Bits & Ticks, a methodology, enabling mechanism and an educational program to infer and apply IT as a significant economic contributor to the organization.

EXEMPLAR IT is complex and expensive if its dealt incorrectly (most of the time even those appear to be correct). Consultancy and professional services provider are plenty and everywhere. Propositions they make, however, must be scrutinized thoroughly to unearth the beauty beneath them and appreciate savings, efficiency, if any, and eliminate wastes.

PROJECTS LED AND DELIVERED Including Technologies and Practices Employed

These projects, see below, had been carried out with one or the general concept made of the AIM processes: acquisition, implementation and management. Inherent to these works are provisions required and explicit specification of systems, migration plan (for systems and its data), operations manual, transparent timescales and service levels as well as budgetary considerations.

Technologies involved were IP Suites, IBM, Microsoft, Oracle, Adobe, Amazon, Cisco, Checkpoint, Symantec, McAfee, HP, Dell, VMWare, Supermicro, Peplink, Sage, Odoo, Intuit, Vinitysoft, Encase, Accessdata, and Opensource – dependable business/production-grade only – and through specific platform, designed and built from scratch business facilities, applications i.e. sizing cloud-platform requirements, web and/or intranet-based computing systems and infrastructure, data recovery, security and control, management systems and processes, cyberstrategy, and relevant dependencies i.e. people, practices and mechanisms.

Policies written and/or facilitated were underpinnings of U.S. Sarbanes-Oxley Act; Philippines: E-Commerce Act, Data Privacy Act, Cybercrime Prevention Act, Information Security with ISO/IEC 27001, Risk Management with ISO 31000, Quality Management with ISO 9001, Service Management with ISO 20000-1. Management systems standards and practices were inherent and was an important measure in the achievement and delivery of these projects.
