**QUALITY GUARANTEED AND EFFORTS COMMITTED** Standardization--an internal fashion, and Compliance--a habit. We have lived and tested everyday by these beliefs for almost 20 years in our professional practice. As we thread our affairs we have seen why we have become different from the pack on our goal to deliver an IT that is expected to facilitate businesses and activities especially of high value.

Find IT to be expensive? Something is wrong. We can help you reverse that experience. We did it many times and will always do. We deal with IT in a manner better than the competition and what IT must be doing for us and our businesses. We prided our output as clients, past and present, have greatly benefitted from our work. It's straightforward and this alone we found it to be completely different considering IT vendors and providers are everywhere, both local and international. Clients we found had bad experience from their IT efforts prior to our team getting in the way to help their company. Our first 24-48 hours with them, we helped unleashed their sixth sense, even going further about their people's potential and their IT. Our professional and business practice and facilities doing consultancy work, experience suggests we always get excited whatever that is presented to us. It is more of an opportunity to bring something different and better economic value for parties and enterprises. And we've never failed our part.

**SMALL DIFFERENCE MATTER** Considering the lifespan of technology, it is. If you're in a situation where you need to really move fast and you need a definitive answer get to us right away. We mean authoritative and influential ones. About technologies—practical solutions that will get you and your business perform better—that's right we are mindful of their existence,

and know most of them if not all including their respective lifecycle. If you haven't tried a consultancy or service provider before we wanted you to experience it from the competition first. What happens is that they will sell you their products. Will free some costs during integration. Or they will offer services first, for free, and advocate their products to you. Then there will be many surprises on fees during which you currently are working with them. Worst the project that you got them into to deal with it will not be delivered completely. Finally, aside from paying them their expensive fee(s), you'll be left with all the questions such as how you can deal with your systems and the only thing you can do is sit-down strike, as if you were really in that conundrum. It will be if you let that problem stick. Those are the unlikely faces of so-called consultancy engagement that you'll get and experience from the competition. That's a strained B2B, significantly human, relationships. That is also the reverse intention of information era. That is as far as we have worked with people and their businesses for almost two decades now.

Our professional IT consultancy and education facilities means it's only going to get better for you and your business. We've helped companies built their IT, they never looked back. Solved problems they've been working on for months, we did it in days if not hours. Administered and managed, savings made and production-experience never better. Consult decision-making, trial-and-error scenario and wastes prevented. Overall outcome, strategic and everyone won.

You may ask which technology do you deal with. We don't have particular technology to endorse. It's not right for you and your businesses. However, you'll see that we've successfully covered almost, hopefully the future will enable us, the entire IT mixture. Mind you, this is not just some specific technology and related products and services.

Our past business deals, almost covered the entirety of IT industry and its prospects, constitutes the following:

- Technologies involved were IP Suites, IBM, Microsoft, Oracle, Adobe, Amazon, Cisco, Checkpoint, Symantec, McAfee, HP, Dell, VMWare, Supermicro, Peplink, Sage, Odoo, Intuit, Vinitysoft, Encase, Accessdata, and Opensource – dependable business/production-grade only – and through specific platform, designed and built these business facilities from scratch, applications i.e. sizing cloud-platform requirements, web and/or intranet-based computing systems and infrastructure, data recovery, security and control, management systems and processes, cyberstrategy, and relevant dependencies i.e. people, practices and mechanisms.
- Policies written and/or facilitated were underpinnings of U.S. Sarbanes-Oxley Act; Philippines: E-Commerce Act, Data Privacy Act, Cybercrime Prevention Act, Information Security with ISO/IEC

27001, Risk Management with ISO 31000, Quality Management with ISO 9001, Service Management with ISO 20000-1 and PCI Data Security Standards.

Management systems standards and practices were inherent and was an important measure in the achievement and delivery of our past, present and future projects. Aren't they expensive? The current market norm says so. With us, never and will make you reflect the value of our work after a few years.

## COMPANIES THAT HAD/HAVE DEALT BUSINESS WITH US

### STRATEGICT COMPANY

- ❖ Service Charter Framework
- ❖ Bits & Ticks, deals organization's technological entropy with and IT in its entirety
- ❖ Consultant's Real Deal, Deal Real Value and Guidance

### DJL GUAM-PI dba BUDGET CAR TRUCK RENTAL PHILIPPINES

- ❖ Systems Upgrade and Calibration
  - Servers
  - Website and Interface/Engine (Outsource)
  - Productivity Suites and Business Applications
  - Networks

#### GOLDSTEIN INTERACTIVE SOLUTIONS

- ❖ Enterprise Computing Policy and Conduct

#### NAVAL INTELLIGENCE TECHNICAL INSTITUTE, PHILIPPINE NAVY

- ❖ Information Security Basics

EDUCATION SERVICES Get trained and educated, regardless of your professional orientation, through ~~itclass~~ technological didactics program. It deals with the business where IT is expected of high quality, utility and safety. Entities thrive due to their capacities to drive their businesses, being practically aggressive on IT as business facility. People realized these benefits them, too. Thanks to their unlimited resources they can deal vociferously on pursuing their businesses. However, money, people and size alone would not make a sure mechanism to achieve a satisfactory business goal. Technology effort has become too big to neglect its impact to enterprises. What remains in organizations competition landscape nowadays are the differences in their influence if not efficacy to acquire, implement and manage (AIM) computing, information, connectivity and enterprise systems (CICES, pronounced as kisses).

How we employ human capital and instilling confidence in them is vital in everything we do now more than ever. With ~~itclass~~ programs humans take everything along them and not to the contrary. No question we must be on top of this. Things being done correctly and in a manner, that is progressive, must be shared through an effective forum with proponents who not only understands as well as executes what businesses meant for their IT but also can share and deliver them for others to adapt and enable themselves to shape their own business objectives and productivity targets.

The education modules and their corresponding delivery time period includes the following:

1. Productivity in the Knowledge Era, 2-day;
2. The IT Practice, 3-day;
3. Business-IT Fabric or Cyberstrategy (our own terms), 5-day.
